Comfort, beauty, convenience and green efficiency in one unique system

A Smarter, Greener Family Fireplace

The Mendota BurnGreen™ gas burner/control system takes fireplace technology to the next level, bringing energy savings, a beautiful fire, total comfort and convenience to your home like never before.

BurnGreen™ means burning smarter

Mendota's environmentally friendly, sealed combustion, direct vent fireplaces with the BurnGreen™ system are designed to meet exacting governmental EPA standards, as well as national LEED® and NAHB guidelines for high efficiency and low emissions.

BurnGreen™ means burning smarter, giving you choices to conserve fuel and help the environment. The versatile BurnGreen™ system lets you turn the burners and the pilot on and off, adjust the heat and blower output—and even turn off the rear burner on mild days. You can also control room temperature using the remote control's digital thermostat. And, it's all done with the touch of a button.

FireLight accent lighting

Mendota fireplaces with the BurnGreen™ system feature FireLight accent lighting that adds drama and interest all year long—whether the log fire is on or off. Its soft, indirect light is also great as a night light.

Comfort at your fingertips

Our smart thermostat feature puts complete comfort within your grasp. Simply set your desired room temperature and the BurnGreen™ system will automatically adjust heat output—so you conserve energy and enjoy even room temperature without the “spikes.”

What you can do from the comfort of your chair:*

- Turn the pilot and burners on and off
- Adjust the heat output to your comfort
- Turn the blowers on and off or adjust blower air output
- Adjust the FireLight accent lighting
- Turn off the rear burner on mild days and late nights
- Set “smart” thermostat for automatic room temperature control

*Remote is standard on models FV41, FV55, FV33i and FV44i, optional on models DXV35 DT3 and DXV45 DT3.

Mendota's dual BurnGreen™ burners are laboratory balanced to create a log fire that realistically duplicates all the different stages of a woodburning fire.

From a roaring, flame-filled fire with lots of heat on cold winter nights to the lazy flames and glowing embers of a romantic late night campfire.

Flame-Filled with High Heat Output

Full Flames with Moderate Heat Output

Lazy Flames/Glowing Embers with Low Heat Output
